Level 1 → Level 2: Reading a File

Objective: Retrieve the password stored in the file named readme.

Command used:
cat readme

Procedure:

1. Logged in using the bandit1 account and the password obtained from Level 0.
2. Inspected the current directory.
3. Used the cat command to display the contents of the readme file.
4. Recorded the password displayed by the file for the next level.

Result: Retrieved the password needed to access the bandit2 account.

Concept learned: The cat command displays file contents directly in the terminal. Understanding how to inspect files is a fundamental Linux skill.
