Level 5 → Level 6: Searching by File Properties

Objective: Locate a file that meets specific criteria, including being human-readable, having a size of 1033 bytes, and not being executable.

Command used:
find . -type f -size 1033c ! -executable

Procedure:

1. Logged in using the bandit5 account.
2. Inspected the available directory structure.
3. Used find to search recursively for regular files.
4. Applied the specified size and executable-status conditions.
5. Inspected the matching file and displayed its contents.

Result: Found the file matching the challenge criteria and obtained the password for the next level.

Concept learned: The find command can search files using multiple conditions. In this command, -type f selects regular files, -size 1033c specifies a size of 1033 bytes, and ! -executable excludes executable files.
