Level 7 → Level 8: Searching for a Specific Word

Objective: Find the password stored in data.txt next to the word millionth.

Command used:
grep "millionth" data.txt

Procedure:

1. Logged in using the bandit7 account.
2. Located the data.txt file.
3. Used grep to search for the specified keyword.
4. Examined the matching line and extracted the associated password.
5.

Result: Retrieved the password associated with the word millionth.

Concept learned: The grep command searches text for lines matching a specified pattern. It is useful for locating relevant information in large text files.
