Windows Event ID Cheat Sheet

#	Windows Event ID	What It Means	When to Use It
1	4624	An account was successfully logged on	Verify successful logins and investigate unusual access
2	4625	An account failed to log on	Investigate failed login attempts and possible brute-force attacks
3	4634	An account was logged off	Review session termination and user activity
4	4648	A logon was attempted using explicit credentials	Investigate processes or users supplying alternate credentials
5	4672	Special privileges assigned to a new logon	Review logons with administrative or other sensitive privileges
6	4688	A new process was created	Investigate suspicious programs, command execution, and process activity
7	4697	A service was installed on the system	Investigate newly installed services and possible persistence
8	4698	A scheduled task was created	Detect unexpected scheduled tasks and persistence mechanisms
9	4720	A user account was created	Audit new accounts and investigate unauthorized account creation
10	4722	A user account was enabled	Review reactivated accounts and potential unauthorized access
11	4728	A member was added to a security-enabled global group	Investigate privilege changes and additions to sensitive groups
12	4732	A member was added to a security-enabled local group	Monitor local group membership changes, including Administrators
13	4740	A user account was locked out	Investigate repeated failed logins and account lockout incidents
14	1102	The Security audit log was cleared	Investigate possible attempts to conceal activity
15	7045	A new service was installed in the System log	Investigate unexpected service installations and potential persistence

Quick tips

- Open Event Viewer: Press Win + R, type eventvwr.msc, and press Enter.
- Find Security events: Go to Windows Logs → Security.
- Find service installation events: Go to Windows Logs → System.
- Filter events: Select Filter Current Log and enter the relevant Event ID.
- Investigate carefully: A single event rarely proves an attack. Correlate timestamps, accounts, source addresses, and related events before drawing conclusions.
